Saveetha Institute of Medical and Technical Sciences
Chennai- 602105

Student Name:G.J.D.Sai Sharan

Reg. No.: 192425152

Course Code:MLA0408

Slot: C

Course Name: DEEP LEARNING

Course Faculty: Dr Sudhagar D

Project Title:AI-Powered Personal Finance Management and Budget Recommendation System Using Deep Learning

Module Photographs: (photographs –Module Photo , student contribution module work in the project and presentation image)

MODULE 2: Smart Expense Classification & Analytics

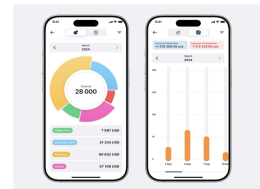

Objective:

To automatically classify financial transactions and analyze spending patterns for better budgeting and financial decision-making.

Key Steps:

- Collect and process user transaction data from multiple sources
- Automatically classify expenses into categories such as food, transport, shopping, healthcare, and bills
- Analyze spending trends using statistical and visual analytics
- Detect unusual or excessive spending patterns through intelligent analysis

Project Description: (here you write what you did in this project (contribution) including Model Description)

Module 2: Smart Expense Classification & Analytics

- Classifies expenses automatically into categories such as food, travel, shopping, bills, and entertainment.
- Uses deep learning techniques to identify spending patterns from transaction data.
- Analyzes daily, weekly, and monthly spending behavior.
- Calculates total expenses for each category.
- Identifies essential and non-essential expenses.
- Detects unusual or excessive spending patterns.
- Compares actual expenses with the user's planned budget.
- Generates spending summaries and category-wise analytics.
- Identifies major spending areas that affect the user's savings.
- Provides analyzed expense data to the budget recommendation module.
